

Mateo Pereira

SOFTWARE ENGINEER · MATEO.PEREIRA2002@GMAIL.COM

 /mateo-pereira

 /in/mateo-pereiracs

Education

Rutgers University

BACHELOR OF ARTS IN COMPUTER SCIENCE

New Brunswick, New Jersey

Sept. 2020 - May. 2024

Experience

Software Engineer

WELLS FARGO

Charlotte, North Carolina

July 2024 - Present

- Developing Java applications to generate packages for Home Lending
- Resolved security vulnerabilities across 25+ Java microservices by implementing code fixes, validating compatibility, and deploying updates to production environments
- Maintained CI/CD pipelines in Harness, OCP, Jenkins, and UCD to automate application builds and deployments.
- Monitored 4+ applications and 20+ environments to detect and resolve application issues, along with contributing to weekly releases
- Working alongside a team of developers to automate verification of the creation of loan packages, which speeds up workflow by 60%.
- Using multithreading in Python to manipulate hundreds of zip files simultaneously per execution, then creates .cec/.cem files with information from each zip file. This makes it so the script can process zip files 250% faster/min. This is then deployed to multiple Linux VM's.
- Making configuration changes to upgrade external/internal libraries and their dependencies using Gradle and Artifactory.
- Creating scripts with OpenRewrite in order to replace files needed to run projects locally, eliminating 45 minutes of setup per application onboarding process

Web Designer

CREATE HUMANITY 501(c)(3)

New York City, New York

Jan. 2022 - Dec. 2023

- Increased sales by over 40% by collaborating with two senior executives on the full-stack design and implementation of the website for over 5000 users monthly using HTML, CSS, and JavaScript.

Projects

Internal Workflow Automation System

CROSS-PLATFORM INTEGRATOR

Charlotte, North Carolina

April 2025 - September 2025

- Automated employee onboarding by using Google Apps Script to trigger emails based on Google Sheets and Docs inputs, and integrated SignRequest for document signing
- Connected Slack for event scheduling and Notion for auto-generated weekly recaps, complete with dynamic task assignment automation

Beast Bot

MULTI-FUNCTIONAL DISCORD BOT

Charlotte, North Carolina

May 2024 - Present

- Developed and deployed a scalable Python-based Discord bot on a Ubuntu-based VM hosted on Oracle Cloud Infrastructure, deployed using docker, and serving over 5000+ users daily
- Integrated MongoDB to manage personalized user, game, and event data
- Built automated features to reward and re-engage users by implementing birthday-triggered subscription discounts and individualized notifications, contributing to a 40% increase in subscriptions

BuyMe

AUCTION SITE

Clifton, New Jersey

May. 2023 - Aug. 2023

- Engineered a full-stack application that replicates eBay's auction functionality.
- Utilized Java's database mapping API, JDBC, to handle and process queries requested on a site created using HTML, CSS, and JavaScript, and stored in a MySQL database.

Skills

Engineering skills + Capabilities

- Languages: Java, Python, SQL, C, Javascript, Lua, Perl, JSP, HTML, CSS, MATLAB
- Technology: MongoDB, Git, Docker, OCP, Harness, Jenkins, Jira, Gradle, Splunk, Groovy, UCD, Postman, Oracle Cloud, Artifactory, Expere, Kafka, Spring Framework, JDBC, Unix, NodeJS
- AZ-900 Certification, DevOps, CI/CD Pipeline, Full stack, Data Management, Algorithms
